

SecurCommander™ Security Management System

SecurCommander[™] is a security management system (SMS) designed specifically for intrusion detection applications. By networking the detection sensors to a central server location, Command, Control, Monitor, and Report functions optimize system management and alarm response. The SecurCommander serverbased intuitive graphical user interface can be accessed via web browser from any device within the VLAN environment. This platform enables users to monitor and manage events through a customizable case management plan. Users can be assigned site-

specific and system-wide permissions based on their individual role.

SecurCommander provides advanced case management. Alarms of various types can auto-generate cases that provide notification, documentation, and alarm response instructions and messaging. **SecurCommander** can communicate

Applications:

- Military
- Correctional
- Critical Infrastructure
- Industrial
- Multi-location sites requiring regionalization

critical information to mobile phones using SMS utilizing the Twilio[®] Platform.

SecurCommander is designed from the ground up to work with the entire Fiber SenSys product line. Fiber SenSys sensors communicate directly over an IP network. IP relay modules support input/output requirements of dry contact sensors such as PIR or beam sensors. Additionally, SecurCommander provides network-level integration with several third-party VMS and ACS platforms.

SecurCommander comes fully installed on a dedicated Windows[®]-based server.

SECURCOMMANDER FEATURES AND BENEFITS						
Case Management	Case management includes a process of identifying, recording, analyzing, monitoring, and resolving events such as alarms, tests, or equipment failures. It includes the collection of data for the adherence to the standard operating procedure and related communications.					
Zone Monitoring	Zone Status: view zones according to status, i.e., all in alarm or all secure. Cases: View disposition of zones by cases based on user-set parameters.					
Reports	Utilizing an SQL database with advanced scheduling and reporting capabilities and features, SecurCommander provides the flexibility to view data, patterns, and information.					
Notifications	Alarm notifications: zone-based notification for alarms or fault conditions. Case notifications: programmable notification of case generation can be key to ensuring the standard operating procedure is followed. Notifications can be delivered via on-screen alerts, e-mail messages, SMS messages, or the triggering of remote relays. Status alerts by parameters, i.e., case generation date can be enabled for follow-up.					
Multi-file Referencing	An unlimited number of files can be attached to events, zones, and cases. This allows for easy access to multiple maps, schematics, images, and documents providing related details and situational awareness of locations, instructions, or guidelines.					

SECURCOMMANDER COMPATIBLE DEVICES

• Fiber Defender[®] Fence Series • Point Defender PD500[™] • Terrain Defender[™] Buried Sensor
